SENIOR PLATFORM SUPPORT / CUSTOMER ENGINEER

PROFESSIONAL SUMMARY

Technical Engineer with 10+ years of experience supporting SaaS platforms, enterprise customers, cloud infrastructure, APIs, security, and complex integrations. Proven success building scalable support operations, technical escalation frameworks, customer self-service, AI-assisted support, and cross-functional processes that improve SLA, CSAT, MTTR, engineering deflection, and customer outcomes.

CORE SKILLS & TECHNOLOGIES

Support & Operations:	Technical Escalations, Incident Management, SLA/CSAT, TTFR, MTTR, FCR, Engineering Deflection, Voice of Customer, Knowledge Management
Cloud / Security:	AWS, Azure, Cloudflare, Imperva, Akamai, WAF, IAM, SSO/SAML, OAuth, WorkOS, Directory Sync
Integrations / Dev:	Jira, Azure DevOps, GitHub, Linear, PostgreSQL, MySQL, Elasticsearch, Python, Bash, JavaScript, APIs, Webhooks
AI / Support Tooling:	GitHub Copilot, Cursor, Anthropic, Kiro, Glean AI, Pylon, Salesforce, Zendesk, PagerDuty, Incident.io, Zapier, Power Automate

PROFESSIONAL EXPERIENCE

ALLSTACKS | Platform Support Engineer | April 2025 - September 2026

- Owned technical support across 50 SMB and enterprise customer accounts, maintaining 99% SLA attainment and 99% CSAT while troubleshooting platform, data, configuration, and integration issues.
- Maintained 99% monthly attainment against targets of 1 business day for first response and 3 business days for resolution (MTTR).
- Reduced support ticket volume and Engineering escalations by 25% month over month through improved technical triage, escalation processes, internal enablement, and customer self-service.
- Designed and owned a Support-to-Engineering escalation framework, triaging issues to distinguish expected behavior from confirmed defects before escalation and protecting Engineering sprint capacity.
- Supported setup and troubleshooting across Jira, Azure DevOps, GitHub, Linear, GitHub Copilot, Cursor, Anthropic Claude Code, and Kiro integrations.
- Led weekly cross-functional bug and feature triage across Pre-Sales, Sales, Customer Success, Engineering, and Product, representing the Voice of the Customer and aligning customer impact with roadmap priorities.
- Owned and restructured public technical documentation, contributing to a 25% month-over-month reduction in support tickets through increased customer self-service.
- Built and managed Support operations in Pylon, including Slack/Microsoft Teams bots, SLAs, CSAT, ticket taxonomy, and MoM/QoQ/YoY reporting across volume, first response, MTTR, escalation rate, Engineering deflection, and first-contact resolution.

VERCEL | Senior Customer Success Engineer | August 2022 - February 2025

- Supported 100+ Enterprise, Pro, and Hobby customer accounts, with primary focus on Enterprise issues involving WAF, IAM, Audit Logs, and Trust & Safety; maintained 97% SLA attainment and 95% CSAT quarter over quarter.
- Maintained 97% first-response target attainment while managing complex technical cases and escalations across Vercel's platform.
- Led 6 platform SME assignments, improving case routing, documentation ownership, and technical expertise and contributing to a 15% quarter-over-quarter increase in first-response and first-contact resolution performance.
- Implemented and trained Markprompt AI self-service workflows for IAM, WAF, and Audit Log issues, contributing to a 10% quarter-over-quarter reduction in related Support tickets.
- Created standardized Engineering escalation frameworks for IAM, WAF, and Audit Logs, defining Linear ownership, priority, impacted services, and Slack escalation channels.
- Led biweekly Product and Engineering reviews for bugs, feature requests, and product launches, improving attainment of the 5-business-day MTTR target from 87% to 94% quarter over quarter.
- Managed dedicated Enterprise and Pro Customer Success labs to validate new features, reproduce issues, and identify product limitations from the customer's perspective.
- Produced weekly leadership reporting covering SLA, escalation rates, case volume, product trends, outages, closures, and AI/self-service deflection.

CALABRIO | Technical Lead | April 2019 - August 2022

- Served as primary API and Workforce Management (WFM) SME, deflecting 90% of related cases from Engineering quarter over quarter while maintaining 97% attainment against a 3-business-day MTTR target.
- Led monthly Transfer of Information sessions on product releases, troubleshooting, process changes, and technical best practices, contributing to a 20% quarter-over-quarter reduction in Engineering escalations.
- Audited 30+ Customer Success and Professional Services cases monthly, evaluating troubleshooting, notes, knowledge usage, escalation quality, and product tagging to identify training opportunities.
- Designed 6 standardized cross-product Engineering escalation templates capturing reproduction steps, expected versus observed behavior, errors, logs, and product context.
- Built Microsoft Teams high-severity notifications using Power Automate, contributing to 95% first-response target attainment.
- Built and managed 4 WFM troubleshooting labs using API/webhook CSV ingestion and nightly Bash automation to maintain current, randomized customer-like test data.
- Led post-deployment validation across 6 AWS sub-region instances, testing adherence, recordings, analytics, and BI workflows and contributing to a 5% quarter-over-quarter reduction in post-deployment Support tickets.
- Managed approximately 6 product-launch initiatives per month with Product, Engineering, Sales, and Implementation across documentation, enablement, technical readiness, and go-to-market messaging.
- Served as IAM SME across multiple identity providers and enterprise implementations, deflecting 50% of IAM-related cases from Engineering and improving related MTTR target attainment to 90% quarter over quarter.
